

Resume Shortlisting System (Python Project)

A practical HR screening automation project built in Python. This report summarizes objectives, implementation, outputs, and results for LinkedIn sharing.

Project Objective

Build a system that reads resumes, matches candidate skills against required job skills, calculates match percentage, ranks applicants, and shortlists top profiles.

Implemented Features

- Read multiple resumes from CSV format
- User-defined required skills input
- Match percentage calculation
- Selection classification using threshold
- Candidate ranking by score
- CSV export of selected candidates
- Bonus: weighted skill matching support
- Bonus: CLI menu interface

Output Snapshot (Console)

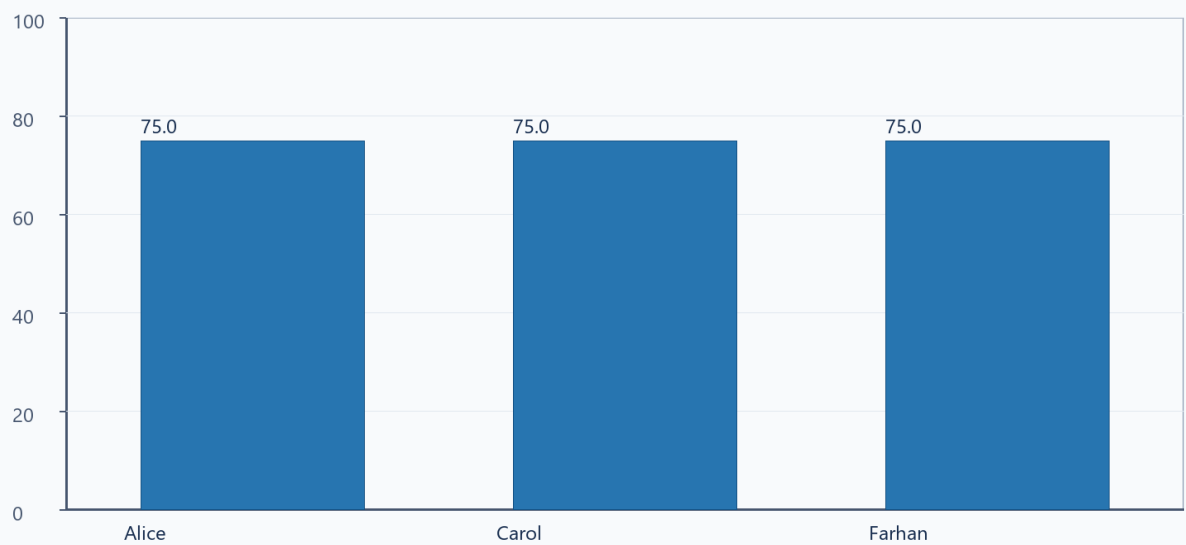

```
Running demo with required skills: Python, React, SQL, Docker

=== Candidate Ranking ===
Rank  Name           Match %   Status   Matched Skills
-----
1     Alice Johnson   75.00    Selected Docker, Python, Sql
2     Carol Lee       75.00    Selected Python, React, Sql
3     Farhan Ali      75.00    Selected Python, React, Sql
4     Bob Smith       50.00    Not Selected React, Sql
5     Eva Brown       50.00    Not Selected Docker, Python
6     Hiro Tanaka     50.00    Not Selected Python, Sql
7     Grace Wilson    25.00    Not Selected React
8     David Kumar     0.00     Not Selected -

Selected candidates exported: 3
```

Shortlisted Candidates Visualization

Selected Candidates Match Score (%)

Shortlisted Candidates (Export Preview)

Rank	Candidate	Match %
1	Alice Johnson	75.00
2	Carol Lee	75.00
3	Farhan Ali	75.00

Final Results

Rank	Candidate	Match %
1	Alice Johnson	75.00
2	Carol Lee	75.00
3	Farhan Ali	75.00

Tech Stack: Python, csv, argparse, dataclasses, ReportLab, Pillow.
